

# Journal of Methods and Measurement in the Social Sciences

## Guide for Contributors

### Mission

The *Journal of Methods and Measurement in the Social Sciences (JMM)* publishes articles related to methodology and research design, measurement, and data analysis. The journal is published twice yearly, and features theoretical, empirical and educational articles.

*JMM* is meant to further our understanding of methodology and how to formulate the right questions. It is broadly concerned with improving the methods used to conduct research, the measurement of variables used in the social sciences, and improving the applications of data analysis. In addition to research articles, the journal welcomes instructional articles and brief reports or commentaries. We welcome sound, original contributions.

### Contributions

The online *Journal of Methods and Measurement in the Social Sciences (JMM)* is a scholarly, peer-reviewed journal that considers contributions to research methods, research design, measurement, and data analysis. *JMM* publishes theoretical and empirical articles, how-to articles (*Nuggets*) and short Notes.

- **Full-length theoretical and empirical manuscripts** focus on issues related to research methods, research design, measurement, and data analysis. Full-length articles may be 20 pages, single-spaced. Contributors should check with the Editor before submitting an unusually long manuscript. Because this is an online journal, there is no limit on appendices.
- The purpose of the **Nuggets** section is to explain and demonstrate methodological, statistical and research techniques. Potential topics include cluster randomized designs, propensity scores, software demonstrations, or adaptive sampling designs. Contributions to **Nuggets** may be from 10 to 20 pages, single-spaced.
- **Notes** addresses research, methodological or statistical issues that can be covered in nine pages, single-spaced. There is no minimum length for short research notes as long as these clearly make a significant point.

### Format for Contributions

*JMM* follows the current *Publication Manual of the American Psychological Association* with the following exceptions: Manuscripts should be single-spaced; Tables and figures should be placed in the text after their first mention; Manuscripts should

include an abstract and three to five key words. All contributions submitted for review must be in English and submitted in MS Word format.

## **Submission Procedure, Publication and Copyright**

Contributions should include a cover letter with the authors' names, telephone numbers, email and mailing addresses, and affiliations. The cover letter should specify the topics (theoretical/empirical; methodology and research design, measurement and/or data analysis), and the type of contribution (full length manuscript, Nugget or Notes). In the cover letter, Authors should articulate the relationship of the manuscript to previous work in the area and explain what this contribution adds to the field. Authors should also attest that the manuscript is not under review elsewhere and all authors have approved of the manuscript. The manuscript should be prepared for blind review. Contributions may be sent to the editor at ***jmethods.email.arizona.edu***.

*JMM* is supported by the University of Arizona Library and there are no charges for publication or access.

## **Guide for Contributors**

Authors must provide permissions for the reproduction of copyrighted images or material used in their submissions. Images (photographs and line art) to illustrate submissions should be sent in separate, individual digital files. Footnotes on individual pages may not be accommodated.

## **After Submission**

Manuscripts will be scheduled for review by two or more experts in the field. Because *JMM* is an online journal, submissions will normally appear within a few months of final approval.

## **After Acceptance**

The primary author will be contacted regarding proofs. Corrections to proofs will be limited to factual errors, copyediting errors and figure quality. Please check the accuracy of figures, tables, and references.

For data analysis articles, the journal recommends that authors include an Appendix with the data (either raw data or correlation matrices) and associated syntax or programming files. The data appendix provides authors with a permanent data repository.

## **Copyright Information**

The *Journal of Methods and Measurement in the Social Sciences* © Copyright Arizona Board of Regents for the University of Arizona. Copyright of individual papers remains with the author(s) so that submissions may be freely utilized by the author(s) in other venues at any time after their publication in *JMM*.
