GLIWICE RADIOCARBON DATES XI

MIECZYSŁAW F. PAZDUR, ROMUALD AWSIUK, TOMASZ GOSLAR, ANNA PAZDUR
ADAM WALANUS and ANDRZEJ ZASTAWNY

Radiocarbon Laboratory, Institute of Physics, Silesian Technical University, Krzywoustego 2
PL-44-100 Gliwice, Poland

INTRODUCTION

The following list presents results of dating archaeological samples from Poland processed between 1979 and 1985. Three carbon dioxide-filled proportional counters (L1, L2 and L3) of different sizes were used for dating (Pazdur et al. 1982). Procedures for sample pretreatment, counting, statistical analysis and age calculations were essentially the same as previously described (Pazdur et al. 1982, 1985). All results are reported as conventional 14C dates in years before AD 1950. Unless explicitly stated, the results are not corrected for isotopic fractionation.

ACKNOWLEDGMENTS

Most dates included in this list were made for the Research Project MR.III.5 coordinated by the Institute of History of Material Culture, Polish Academy of Science. This contribution was made possible by grant PB 740/6/91 from the State Committee for Scientific Research.

THE PALEOLITHIC AND MESOLITHIC

Rydnó Series

Charcoal from various units of a hematite mine in Rydnó (51°5′N, 21°10′E), Nowy Mlyn Village, Kielce district, foothills of Holy Cross Mts. Dated to establish main phases of hematite exploitation, lasting from the Late Paleolithic until the Roman period (Schild and Krolik 1981). Submitted 1982 by R. Schild, Institute of Archaeology and Ethnology, Polish Academy of Sciences, Warsaw.

Gd-710. Rydnó Trench I/1977
Small pieces scattered at base of Shaft 1 at depth 88–95 cm; collected 1977 by J. Moscibrodzka.

Comment (R.S.): Associated with the Masovian cycle dated to the Younger Dryas; expected age, 8800–7800 BC. Charcoal from hearth in uppermost part of same shaft dated to 1510 ± 55 BP: Bln-2036.

Gd-713. Rydnó Trench III/1979 #1
Scattered chips from the oldest phase of fill from the Great Opening consisting of conglomerates, depth 50–80 cm. All samples from Trench III/1979 collected 1979 by M. Marczak.

Comment (R.S.): No associated cultural material.

Gd-719. Rydnó Trench III/1979 #2
Small pieces from fill of the Little Opening; depth 44 cm.

Gd-724. Rydnó Trench III/1979 #3
Small pieces from the 2nd phase of fill from the Great Opening consisting of sandy conglomerates; depth 70–80 cm.

**Całowanie Series**

Single fragments of partly burned wood from Late Paleolithic cultural layers at the edge of a dune at contact with a peat bog in Całowanie (52°6'N, 21°14'E), south of Otwock, Warsaw district. Całowanie is a key site for interdisciplinary studies of the Final Paleolithic in Poland. It is located in the center of an abandoned channel of the Vistula River filled with thick beds of peat and some sandy islands with traces of human occupation. Results of the first interdisciplinary studies in Całowanie, conducted by R. Schild over several seasons (1963–1969) were summarized by Schild (1982) and Dąbrowski (1981). Samples from Trench VII/1966 collected 1966 and from Trench X/1983 collected July 1983 and submitted 1983 by R. Schild.

Gd-1669. Całowanie #5
A small pale with traces of artificial treatment, Trench X/1983, top of Level 11a, cultural layer VIII; depth 50 cm.

Gd-1717. Całowanie #6
Trench VII/1966, Level 11b, cultural layer VII; depth 127 cm.

Gd-1719. Całowanie #7
Same location; depth 120 cm.

Gd-2198. Całowanie #8
Same location; depth 120 cm.

Gd-3041. Całowanie #9
Same location; depth 147 cm.

Gd-1721. Całowanie #10
Same location; depth 140 cm.

Comment (R.S.): This series supplements earlier 14C dates of charcoal or charred wood obtained in Groningen. The dates, in stratigraphic order, are as follows: base of Level 9b: 10,455 ± 90, GrN-5049; near top of Level 9b: 9935 ± 110, GrN-5254; base of Level 11b: 9250 ± 55, GrN-5251 and 9200 ± 75, GrN-5442; topmost part of Level 11a: 8360 ± 75, GrN-5966.

Chwalim Series
Wood and charcoal from a peat bog situated close to a Mesolithic settlement, Site 1 on a terrace of the Gnita Obra River in Chwalim (52°7'N, 15°55'E) near Kargowa, Zielona Góra district, Great Poland Lowland. Collected July 1979 and submitted 1979 by M. Kobusiewicz, Institute of the History of Material Culture, Polish Academy of Sciences, Poznań.

Gd-1164. Chwalim I WKT III/79 #1
Charcoal from a layer of brown undecomposed peat at the base of a peat bog adjacent to an older terrace with a Mesolithic settlement, Trench III/79; depth 190–200 cm.

Gd-1165. Chwalim I WKT III/79 #2
Wood from a large tree trunk found at the base of a peat bog, same locality; depth 165 cm.

Gd-1176. Chwalim I WKT II/79 #1
Fragments of a partly burned shingle found in a layer of black peat mixed with charcoal dust at the base of a peat bog adjacent to a younger terrace with a Neolithic settlement, Trench II/79; depth 210–220 cm.

Comment (M.K.): Charcoals from layer associated with Mesolithic settlement were dated to 9500 ± 75: Bln-1766; charcoal from layer associated with a Neolithic settlement was dated to 3900 ± 50: Bln-1767; 4280 ± 45; Bln-2019; and 4375 ± 50: Bln-2018 (Kobusiewicz 1980).

Gd-389. Krzekotówek K-8-I/72
Charcoal from a hearth in a Mesolithic dwelling in Krzekotówek (51°42'N, 16°18'E), near Głogów, on a dune covering a terrace of the Krzycki Rów River. Collected 1972 and submitted 1976 by Z. Bagniewski.

Comment (Z.B.): Date agrees well with archaeological dating to the beginning of the Atlantic phase.
Gd-2432. Janislawice J1  
Bone collagen from a Mesolithic grave in Janislawice (51°40'N, 20°5'E), near Gruchów, Skini-jeewice district. Collected 1937 by K. Jażdżewski; submitted 1985 by Z. Sulgostowska, State Archaeo-
logical Museum, Warsaw.

Elk Series

Gd-1527. Elk I/1  
6310 ± 70
From a hearth in a cultural layer at depth 30–50 cm, associated with Late Paleolithic/Mesolithic artifacts.

Gd-1546. Elk I/2  
3050 ± 50
Dispersed in cultural layer, Trench 2; depth 20–40 cm.

Gojisć Series
Charcoal from an open Paleolithic site on terrace of Warta River in Gojisć (51°4’N, 19°10’E), Kraków-Wieluń Upland, Czêtochowa district. Collected and submitted 1983 by Bolesław Ginter, Institute of Archaeology, Jagellonian University, Kraków.

Gd-1642. GI/81/30–35 cm  
2260 ± 40
Hearth in Trench I; depth 30–35 cm.

Gd-1643. GII/81/30 cm  
990 ± 50
Hearth in Trench II; depth 30 cm.

Gd-2122. GIII/81/30–50 cm  
1290 ± 80
Hearth in Trench III; depth 30–50 cm.

Gd-2123. GIII/81/100 cm  
4020 ± 90
Hearth in Trench III; depth 100 cm.

Gd-2124. G-S/5/100–130 cm  
4030 ± 90
Hearth in Trench S/S; depth 100–130 cm.

Comment (B.G.): The site is associated with the exploitation of a flint mine of the Swiderian culture; expected age: 8–9 kyr BP. Dates are much younger than expected.

NEOLITHIC

Wożna Wieś Series

Gd-2431. W I/3/74  
5900 ± 100
Collagen from a human bone from a single skeleton found at depth 30–90 cm, Trench 3, Square 11.
Gliwice $^{14}C$ Dates XI

Gd-3134. WW I/1/78
Charcoal from a hearth (?), Trench 1; depth 60–90 cm.

Gd-2429. Firlus 8/10/4
Charcoal from cultural layer 4 at the base of Pit 4, Trench 10, depth 70–80 cm, Site 8 in Firlus (53°16'N, 18°38'E) on E shore of Młyńskie Lake, near Popowo Biskupie, Toruń district, Chełmińskie Lakeland. Collected 1983 and submitted 1984 by R. Kirkowski, Regional Museum, Grudziądz.

Dęby Series
Charcoal from a Neolithic settlement in Dęby, Site 29 (52°40'N, 18°35'E), near Dobre, district Włocławek, Kujawy Plateau.

Gd-2148. D29/32-186
From the basal part of Object 32 of worship type; depth 30–50 cm. Collected 1983 by J. Czебrzeszcuk and submitted by A. Kośko.

Comment (A.K.): Sample dates cultural disintegration in the Late Neolithic and the first occurrence of typical features of Bronze Age cultures in the Kujawy region (Kośko 1981a).

Gd-2278. D29/84 #1
Single fragments of charcoal from a pit made by a pole of a Neolithic cottage, Trench VII; depth 60 cm. Collected July 1984 by L. Domanska; submitted August 1984 by A. Kośko.

Comment (A.K.): Dates influences of Janisławice culture; expected age: 4th millennium BC.

Gd-1928. D29/85 #3
Charcoal dispersed in the vestibule of a Neolithic cottage; depth 60–70 cm. Collected July 1985 by L. Domańska; submitted October 1985 by A. Kośko.

Comment (A.K.): Sample from the same cultural level as Gd–2278.

Gd-2482. D29/85 #4
From a hearth belonging to a Late Mesolithic habitation, Trench XV/XX; depth 80–90 cm. Collected July 1985 and submitted 1986 by L. Domańska.

Białoż Stary Series
Charcoal from a Neolithic settlement in Białoż Stary (52°20'N, 16°40'E), Site 4, near Smigiel, Leszno district, Great Poland Lowland. Collected by L. Czerniak; submitted by T. Wiślański, Institute of the History of Material Culture, Polish Academy of Sciences, Poznań.

Gd-2054. BS 4/46
Charcoal (Pinus sp., identified by K. Surmiński) from layer in upper part of Pit 46 belonging to Stroked Pottery culture, depth 90–100 cm. Collected June 1980.

Gd-1608. BS 4/109Be
From the base of Pit 109Be of the late phase of the Bandkeramik culture (Czerniak 1980), depth 60–80 cm. Collected July 1982.

Gd-1753. BS 4/154
From the base of Pit 154.
Dąbrowa Biskupia Series
Charcoal from large Neolithic settlement in Dąbrowa Biskupia, Site 21 (52°46'N, 18°32'E), district Bydgoszcz, Kujawy Plateau. Collected 1984 by M. Szmyt and submitted by A. Kośko.

Gd-2277. DB 21-81/90A 8500 ± 110
From depth 60 cm, the base of Object 81/90.

Gd-2289. DB 21-92a 4400 ± 140
From the central part of Object 92; depth ca. 70 cm.

Gd-1929. DB 21-81/90BB 7920 ± 70
From a collection of charcoal (hearth?) at the edge of a large half-dugout; depth 92–114 cm. Collected 1983 by P. Chachlikowski.

Gd-2509. Węgierce 12/1 5860 ± 100
Scattered fragments of bone from depth 1.1–1.5 m, Pit 1 of an early Neolithic settlement, Site 12 in Węgierce (52°45'N, 18°9'E) near Janikowo, district Bydgoszcz, Kujawy Plateau. Collected July 1985 by M. Szmyt; submitted December 1985 by A. Kośko.

Comment (A.K.): Associated archaeological material indicates Phase 1b of the Late Bandkeramic culture; the date fits with expected age: 3800–3700 BC.

Opatowice Series
Charcoal from a Neolithic settlement in Opatowice, Site 33 (52°43'N, 18°33'E) near Radziejów, district Włocławek, Kujawy Plateau.

Gd-2287. Opatowice 33-3A 6190 ± 120
From a half-dugout, Object 3, depth ca. 80 cm. Collected June 1983 and submitted 1984 by A. Kośko.

Comment (A.K.): Dates the beginning of traces of southeastern European influences on Polish Lowland cultures (Kośko 1981a).

Gd-2472. Opatowice 3/21 4570 ± 80
From the fill of Pit 21; depth 70–150 cm. Collected 1985 by P. Makarowicz; submitted October 1985 by A. Kośko.

Comment (A.K.): Dates the classical phase of the Radziejów group of the Funnel Beaker culture.

Gd-1799. Jeziuicka Struga 17-V/4 7530 ± 70

Gd-2151. Korzecnik 6/7 #17/18 4890 ± 100
Charred wood from a half-dugout of a Late Neolithic settlement in Korzecnik (52°19'N, 18°47'E) near Kłodawa, Konin district, Kujawy Lakeland. The sample is from two collections of charcoal in the fill of Object 12, Trench VII, Site 6/7; depth 40–60 cm. Collected July 1981 by J. Czebreszczuk; submitted October 1983 by A. Kośko.

Comment (A.K.): Dated to establish the decline of Neolithic cultures in the Kujawy region (Kośko 1979).
Gd-2152. Stara Wieś 9A:212/9B/2680
Single pieces of charcoal from the center of dwelling pit at depth 30–60 cm, Site 9A of a Neolithic settlement in Stara Wieś (52°55'N, 18°15'E) near Rojewo, district Bydgoszcz, Toruń-Eberswald Pradolina. Collected 1983 by M. Szmyt; submitted 1983 by A. Cofta-Broniewska.

Gd-1985. Inowroclaw 95/1830
Collagen from human bones from the grave of the Funnel Beaker culture, Site 95 in Inowroclaw (52°46'N, 18°15'E), district Bydgoszcz, Kujawy Plateau. Collected July 1979 by J. Bednarczyk; submitted 1985 by A. Koško.

Gd-1983. Krusza Podlotowa 2/31
Collagen from an animal bone from Site 2 in Krusza Podlotowa (52°46'N, 18°14'E) near Inowroclaw, district Bydgoszcz, Kujawy Plateau. The site is located in black soil cover of the lower terrace of the Noteć River Pradolina. Object 31 with animal bones and stones has the shape of a shallow pit ca. 20 m long with several collections of bones at depth 40–60 cm. Collected September 1985 by P. Chachlikowski; submitted by A. Koško.

Comment (A.K.): Dates final phase of the Radziejów group of Funnel Beaker culture; the date is consistent with Gd-2472, 4570 ± 80 BP, corresponding to the classical phase of this group (Koško 1981b).

Łagiewniki Series

Gd-814. Łagiewniki 5A ob. 45
From a storage pit, Object 45, Site 5A.

Comment (T.W.): Dates the latest phase of the Funnel Beaker culture, the Radziejów group (Koško 1981b).

Gd-1276. Łagiewniki 3 ob. 29
From the base of a grave pit, Object 29, Site 3; depth 100–120 cm.

Gd-813. Łagiewniki 3 ob. 40
From the base of a refuse pit, Object 40, Site 3; depth 90 cm.

Comment (T.W.): Site 3 contains artifacts of the Funnel Beaker culture with influences from the “southeastern European factor” (Koško 1981a).

Gd-2222. Lisewo L-31/439
Charcoal from a storage pit, Object 4, depth 30–40 cm, Site 31 of the Funnel Beaker culture in Lisewo (53°18'N, 18°41'E), Toruń district, Chelmińske Lakeland. Collected 1983 and submitted 1984 by S. Kukawka, Institute of Archaeology and Ethnography, Mikołaj Kopernik University, Toruń.

Comment (M.F.P.): Very small sample, diluted with inactive CO2 for counting.
Gd-886. Zawada 1/80 5710 ± 120
Charcoal, part of a burned log from a palisade of a fortified settlement, Site 1, Trench 52, Object 32, depth 55 cm. This site, with several cultural levels, is located in Zawada (50°28'N, 21°20'E) near Polaniec, Tarnobrzeg district. It was intensively occupied by the Tarnobrzeg group of the Lusatian culture. Collected 1980 and submitted March 1981 by J. Michalski, Institute of Archaeology, Warsaw University, Warsaw.

Comment (J.M.): The date is older than expected; Kanwiszer and Trzeciak (1984) published a series of dates confirming the Lusatian occupation.

Gródek Nadbużyń Series
Charcoal from a Neolithic settlement situated on loess inselberg on a terrace of the Bug River in Gródek Nadbużyń (50°48'N, 23°27'E) near Hrubieszów, Zamość district, Wolhynia Upland. Excavations at Site 1C resulted in the discovery of several phases of Neolithic occupation, associated with the Funnel Beaker (FB) and Wolhynia-Lublin Painted Pottery (WLPP) cultures and the Lengyel-Polgar Cycle (LPC). Collected 1983, 1984 and 1985 and submitted 1985 by S. Jastrzębski, Department of Archaeology, Maria Curie Skłodowska University, Lublin.

Gd-2160. G1C ob.2/83 s#1 5010 ± 110 From the center of Pit 2/83, Trench I/83, depth 80 cm, FB culture.
Gd-2163. G1C ob.2/83 s#2 5030 ± 90 From the lower layer of the same pit, depth 100 cm.
Gd-1918. G1C ob.7/83 4750 ± 50 From the base of Pit 7/83, associated with a fragment of baked red clay, depth 120 cm, FB culture.
Gd-2441. G1C ob.13D/84 4830 ± 90 From Layer II containing numerous shells of bivalves with animal bones and dispersed charcoal, Pit 13D/84, Trench II/84, depth 100 cm, associated with artifacts characteristic of the FB culture and the late phase of LPC.
Gd-2454. G1C ob.13E/84 4840 ± 120 From Layer IV, Pit 13E/84, depth 70–90 cm, associated with pottery of the FB culture.
Gd-2455. G1C ob.13F/84 4330 ± 80 From Layer IV, base of Pit 13F/84, depth 160 cm, FB culture.
Gd-2442. G1C ob.18C/84 4530 ± 70 From Layer V at the base of Pit 18C/84, depth 140 cm, associated with baked clay and numerous fragments of pottery of the FB culture.
Gd-2440. G1C ob.10/85 4580 ± 90 From Layer V at the base of Pit 10/85, depth 100 cm, FB culture.
Gd-2427. G1C ob.22/85 4690 ± 70 From the fill of Pit 22/85, Trench I/85, depth 150 cm, FB culture.
Gd-2468. G1C s#25/85 4750 ± 120 From the fill of a ditch, the upper part of Layer II, depth 110 cm.
Gd-2439. G1C s#27/85 5110 ± 60 From the fills of the same ditch, Layer V, depth 200 cm.
Comments (S.J. and M.F.P.): The ditch is associated with the WLPP culture and is intersected by some pits associated with the FB culture. For a general outline of the chronology of the southeastern group of the FB culture, see Wiślański (1979); details of earlier excavations are described by Kwalczyk (1968). A general outline of the WLPP culture is given by Gurba (1974); elements of other cultures in this site are discussed by Kempisty (1962) and Poklewska (1958).

Sandomierz Series

Gd 984. Żmigród
From the fill of Pit 3, depth 15–35 cm.

Gd-2040. Wzgórze Zawichojskie ob.4
From the fill of a ditch, Trench I/82, depth 130 cm.

Gd-2041. Wzgórze Zawichojskie p6
From the fill of Pit 6, Trench I/82, depth 40–75 cm.

Comment (H.K.M.): The first two samples are associated with the LPC of the Early/Middle Neolithic; the third is associated with the Mierzanowice culture dated to the end of the Neolithic/beginning of the Early Bronze Age. For a general reference, see Kruk (1973) and Kulczycka-Leciejewiczowa (1979).

Las Stocki Series

Charcoal from the settlement of Wolhynia-Lublin Painted Pottery culture (Gurba 1974), Site 7 in Las Stocki (51°20'N, 22°3'E) near Końskowola, Lublin district, on the loess cover of the Nałęczów Plateau, ca. 175 m asl. Collected 1982 and 1983 and submitted May 1984 by A. Zakościelna, Department of Archaeology, Maria Curie Skłodowska University, Lublin.

Gd-2204. LS 7/5-XI
Burning layer XI at the base of Pit 5, depth 120–130 cm.

Gd-2205. LS 7/19-IX
From cultural layer IX at the base of a pit below dwelling object 19, depth 130–140 cm.

Gd-1723. LS 7/36-V
From cultural layer V at the base of Pit 36, depth 65–70 cm.

Gd-1724. LS 7/28-X
From cultural layer X at the base of Pit 28, depth 120 cm.

Comment (A.Z.): The expected age was 3200–3000 BC for this series, which fits well with a previous 14C date of the WLPP settlement in Wąwolnica, Nałęczów Plateau 5070 ± 210 BP, Lod 178 (Kanwiszer and Trzeciak 1986). Wiślański (1979) compared pottery assemblages with other sites in the area.

Pałecznica Series

Charcoal from a Late Neolithic site in Pałecznica (50°14'N, 20°18'E), Kielce district, Miechów Upland, at the top of a loess hill. Collected August 1983 and submitted November 1983 by Z. Liguzińska Kruk, Institute of the History of Material Culture, Polish Academy of Sciences, Kraków.
Gd-1673. Palecznica #6
From a channel with traces of wooden beams surrounding a mound, depth 60–70 cm.

Gd-2156. Palecznica #7
From a layer at the top of a grave.

Comment (Z.L.K.): Gd-1673 dates the oldest phase of the Corded Ware culture in southern Poland (Machnik 1966, 1978); Gd-2156 is obviously erroneous.

Gd-2428. Wichorze 24/1/2
Charcoal from the basal layer at depth 1 m in a midden pit associated with the Globular Amphora culture (KAK), Site 24, Trench 1, Object 2, atop a hill in the valley floor of the Struga Żacka River in Wichorze (53°18'N, 18°32'E), near Stolno Village, Toruń district, Chelmińskie Lakeland. Collected and submitted 1984 by R. Kirkowski.

BRONZE AGE

Gd-2297. Topółka R14/263
Charcoal from the center of a furnace pit at depth 60–80 cm, Object 9 of Bronze Age settlement in Topółka (52°30'N, 18°14'E), district Włocławek, Kujawy Lakeland. Collected July 1984 by J. Czebreszczyk; submitted August 1984 by A. Kośko.

Comment (A.K.): The date fits fairly well with the Early Bronze Age chronology established for the Kujawy region (Kośko 1979).

Gd-2289. Narkowo N9/236
Charcoal from the center of a hearth at depth 40–60 cm in Object 1 (furnace pit?) of a Bronze Age settlement, Site 9 in Narkowo (52°40'N, 18°35'E) near Dobre, district Włocławek, Kujawy Plateau. Collected August 1984 by J. Czebreszczyk; submitted August 1984 by A. Kośko.

Comment (A.K.): Associated material shows first traces of features typical for the Lusatian culture (Kośko 1979).

Gd-1684. Podgaj 6A/3374
Collagen from human bones from the base of a grave pit, Object 62, Site 6A of the Bronze Age in Podgaj (52°50'N, 18°37'E) near Aleksandrów Kujawski, district Włocławek, Kujawy Plateau. Collected August 1982 by P. Chachlikowski; submitted June 1983 by A. Cofta-Broniewska, Institute of Prehistory, Adam Mickiewicz University, Poznań.

Comment (A.C.-B.): Dated to establish a chronology of EB Epi-Corded Ware groups of the Polish Lowlands.

Bożejewice Series

Gd-888. B8/2251
Charcoal from a burned bow at the base of a burial pit, Object 32, depth 2 m.
Gd-1349. B8/2257
Charred wood from a coffin made of a single tree trunk ("log grave"), Object 2, depth 80 cm.

Gd-2171. B8/10822
Human bone from a grave pit, Object 5, depth 40 cm.

Comment (A.K.): Boundary of the 2nd and 3rd periods of the Bronze Age; sample dates the beginning of the Lusatian culture in the Kujawy region.

Gd-3025. B8/10852
Human bones from a grave pit, Object 24, depth ca. 60 cm.

Gd-2499. B8/10852bis
Repeat run of Gd-3025.

Comment (M.F.P.): Collagen extracted in 1981 was stored in glass jar for four years.

Gd-2462. Krusza Zamkowa 16/2350
Charcoal found at depth 50 cm between stones surrounding a grave in Krusza Zamkowa, Site 16 (52°45'N, 18°12'E) near Inowrocław, district Bydgoszcz, Kujawy Plateau. Collected 1981 by M. Klundner; submitted 1985 by A. Kośko.

Siciny Series
Charcoal and human bones from Bronze Age graves, Site 5, in Siciny (51°45'N, 16°32'E), near Niechlów, Leszno district, Great Poland Lowland. Collected and submitted by T. Wiślański, Institute of the History of Material Culture, Polish Academy of Sciences, Poznań.

Gd-1166. Siciny 5 gr.17#49
Charcoal from cremation burial 17, depth 60–80 cm. Collected and submitted 1979.

Comment (T.W.): Grave belongs to a well-developed phase of the Unietyce culture, I/II period of the Bronze Age.

Gd-2111. Siciny 5 gr.1#1
Gd-2164. Siciny 5 gr.1#2
Collagen from human bones of two skeletons from Grave 1 associated with a late phase of the FB culture, in a deep pit with a stony pavement, depth 120–130 cm. Collected 1978 and submitted 1982.

Gd-2165. Siciny 5 gr.13#A
Collagen from a poorly preserved human skeleton found at the base of Grave 13, depth 120–130 cm, underlying a pit of the Lusatian culture. Collected 1979 and submitted 1982.

Comment (T.W.): Gd-2165 is a unique set of copper artifacts and dates the final phase of the Bandkeramic culture.

Gd-388. Siedlnica S-6/2-II/75
Charcoal from a hearth in a dwelling of fishing and hunting population in Siedlnica (51°45'N, 16°21'E), near Wschowa, a terrace of the Kopanica River, Great Poland Lowland. Collected and submitted 1975 by Z. Bagniewski, Institute of Archaeology, Wrocław University, Wrocław.

Comment (Z.B.): Gd-388 is much younger than expected; the site is archaeologically dated to the end of the Boreal.
Goldap Series
Charcoal from cultural layers of Site Ic in Goldap (54°20'N, 22°20'E), Mazury Lakeland, northeast Poland. Collected 1972 and 1973 and submitted 1982 by J. Trzeciakowski.

Gd-2031. Goldap Ic, layer 1/1  2460 ± 100
Gd-2032. Goldap Ic, layer 1/2  1570 ± 60

Nieborowa Series

Gd-1163. NbI/5B  1390 ± 60
From remains of a hut in an alluvial layer of sandy soil, Site I, Trench 5, depth 80–100 cm.

Gd-1161. NbI/6A  7120 ± 70
Hearth at depth 45–60 cm, Site I, Trench 6.

Gd-1160. NbI/7A  870 ± 40
Hearth at depth 60–70 cm, Site I, Trench 7.

Gd-1162. NbI/9A  6750 ± 70
Hearth at depth 30–40 cm, Site I, Trench 9.

Gd-1528. NbII/1H  930 ± 60
From a burned log at depth 80–90 cm, Site II, Trench 1.

Gd-1529. NbII/1G  520 ± 60
Hearth at depth 35–70 cm, same location.

Comment (M.F.P. & H.M.): Other dates from Site I: Le-335, 8250 ± 160; TF-754, 2680 ± 100; for earlier dates from Gliwice, see Mościcki and Zastawny (1976), Mościcki et al. (1978).

Szarbia Series

Gd-2011. Szarbia #72/81  3670 ± 60
Trench V, Object 1, depth 95–115 cm.

Gd-2012. Szarbia #30/82  3460 ± 60
Trench VII, Object 6, depth 120–140 cm.

Gd-2103. Szarbia #162/82  3680 ± 100
Trench VII, Object 15, depth 180–200 cm.

Gd-2104. Szarbia #122/81  3380 ± 100
Trench V, Object 14, depth 125–145 cm.
Gd-2154. Szarbia #70/83  
Trench IX, Object 29, depth 110–130 cm.  
Gd-2153. Szarbia #69/83  
Trench IX, Object 9, depth 130–150 cm.  

*Comment (J.M.): The series dates the youngest phase of the Mierzanowice culture. Another date from the same site is 3530 ± 60 BP: Bln-2575.*

Ożarów Series

Gd-2108. Shaft 3 Level 9/114-154 cm  
Gd-2114. Shaft 3 Level 8/74-114 cm  
Gd-2115. Shaft 4 Level 9/120 cm  
Gd-2449. Shaft 1 #1  
From the top of sandy scree, Trench I, Shaft 1, Levels 8 and 9, depth 25–144 cm.  
Gd-2450. Shaft E #41  
From the top of anthropogenic fill of Shaft E, Trench IV, Level 2, depth 70–125 cm.  
Gd-2448. Shaft D #40  
From the top of anthropogenic fill of Shaft D, Trench IV, Levels 1 and 2, depth 50–90 cm.  
Gd-2443. Shaft B #39  
From the top of sandy scree overlain by an anthropogenic layer, Trench IV, Shaft B, Levels 2 and 3, depth 105–160 cm.  
Gd-2451. Shaft L #60  
From the top of sandy scree, Trench VII, Shaft L, Level 3, depth 80–95 cm.

*Comment (J.B.): Ożarów site belongs to the Mierzanowice culture from the end of the Neolithic and the beginning of the Bronze Age; expected age: 1400–1800 BC (Machnik 1978). Other 14C dates of this culture in Poland are from Polany Kolonie II (Schild, Królik and Mościobrodzka 1977) and Iwanowice (Machnik 1978).*

Oslonino Series

Charcoal from a settlement of Rzucewska culture, Site 2 in Oslonino (54°40'N, 18°28'E) near Puck, Gdańsk district, Kaszuby Coastal Area. The site is located on Kęp Pucka hill near the cliff shore of Puck Bay, 14 m asl. Collected by D. Król; submitted 1983 and 1984 by T. Wiślański.

Gd-1606. s#2/80  
Part of a burned pile associated with pile cottage 2, Trench II/80, depth 2.68 m; collected July 1980.  
Gd-1607. s#3/81  
From the south part of fill of burned pile cottage 3, Trench IIA/81, depth 2.08 m; collected July 1981.  
Gd-1752. s#4/83  
From a burned pile from pile cottage 4/83, Trench X, depth 1.8 m; collected July 1983.
Gd-3067. s#4/83bis
Duplicate run of Gd-1752.

Comments (M.F.P. & D.K.): Gd-3067 was dated as a check of a new proportional counter assembly (L2). The dates agree fairly well with the accepted chronology of the Rzucewska culture (Żurek 1953; Wiślański 1979; Machnik 1979).

Gd-2016. Słonowice 1
Charcoal from depth 70–95 cm, Pit 8, Trench VIII, Site G in Słonowice (50°10'N, 20°29'E), near Kazimierza Wielka, Kielce district, Proszowice Plateau. Collected 1982 by K. Tunia and submitted by J. Machnik. The site is located in loessy cover on the south slope of the Małoszówka River valley. Associated artifacts belong to the Trzciniecka culture of the II/III period of the Bronze Age.

Comment (K.T.): Expected age: 1500–1000 BC.

Gd-1760. Ulucz 1/82
Charcoal from the basal layer of a pit dwelling in Ulucz (49°40'N, 22°16'E), near Dydnia, Krosno district, west Carpathians. Site 3 is located on an alluvial cone of the Borownica River at its mouth to the valley of the San River. Gd-1760 is from the south of Object 13B, depth 70–110 cm, associated with pottery of the Late Bronze/Early Iron Age (Parczewski 1983). Collected 1982 and submitted 1984 by M. Parczewski, Institute of Archaeology, Jagellonian University, Kraków.

IRON AGE

Psary Series
Charcoal from basal parts of iron smelting furnaces and other features of a settlement of the Roman period associated with iron metallurgy in Psary, Site 1 (51°40'N, 16°17'E), near Jemielno, Leszno district, Lower Silesia. The settlement covers ca. 20 ha with 8 smelting sites; the largest Site 1 consists of 89 iron smelting furnaces arranged in uneven rows (Mamzer 1983; Mamzer and Pazdur 1984). Collected 1982 and submitted 1983 by H. Mamzer, Institute of the History of Material Culture, Polish Academy of Sciences, Poznań.

Gd-1426. Pit #193 2080 ± 50
Gd-1427. Furnace #55 1950 ± 50
Gd-1428. Furnace #63 2030 ± 60
Gd-1429. Furnace #71 2110 ± 60
Gd-1430. Furnace #43 1890 ± 50
Gd-1431. Furnace #76 2030 ± 50
Gd-1432. Furnace #60 1930 ± 60
Gd-1633. Furnace #185 1910 ± 40

Comment (H.M. & M.F.P.): This site is representative of a metallurgic region of Lower Silesia, consisting of > 50 sites situated mainly between the Barycz and Odra Rivers. These results indicated that the main activity of this metallurgic center is synchronous with the Holy Cross Mts. and Masovian centers of prehistoric iron metallurgy in Poland (Pazdur, Pazdur and Zastawny 1981; Pazdur 1990).

Opole-Grotowice Series
Wood of oak trunks from a terrace of the Odra River in Opole-Grotowice (50°35'N, 17°55'E), at depth ca. 5 m in series of fine gravels. Collected June 1975 by W. Piszczatowski and submitted 1975 by J. Kaźmierczak, Institute of Archaeology, Wrocław University, Wrocław.

**Izdebno Series**

Wood and charcoal from a fortified settlement of the Lusatian culture at a peninsula in Wolskie Lake near Izdebno (52°45'N, 17°39'E), 13 km southwest of Żnin, Gniezno Upland, Great Polish Lowland. Collected 1979 and submitted 1985 by B. Nowaczyk, Institute of Quaternary Research, Adam Mickiewicz University, Poznań.

- **Gd-1184. Izdebno 79/1**  
  Wood from an oak log from a road surrounding the settlement, presently 1.4 m below water level (Nowaczyk et al. 1982).

- **Gd-717. Izdebno 79/2**  
  Charcoal from a layer of clayey sands overlying the courtyard of the settlement, depth 1.2 m.

*Comment (B.N.): Older than expected.*

**Smuszewo Series**

Wood and charcoal from the remains of an individual house, 80 cm deep, in a fortified settlement of the Lusatian culture, Early Iron Age in Smuszewo (52°54'N, 17°24'E), Pila district (Durczewski 1970). Collected 1984 by D. Durczewski and submitted 1985 by L. Krzyżaniak, Archaeological Museum, Poznań.

- **Gd-3171. Smuszewo 1/84**  
  Wood from a wall.

- **Gd-3173. Smuszewo 2/84**  
  Charcoal from the floor of a house, probably a hearth.

- **Gd-3172. Smuszewo 3/84**  
  Wood from the floor.

- **Gd-3050. Michelin M-1/262**  
  Wooden pile from an enclosure (?) on a terrace of the Wisła River in Michelin (52°35'N, 19°1'E), Site 1, near Włocławek. Collected and submitted by S. Kukawka.

*Comment (S.K.): Expected age ca. 2000 BC, which is much younger than expected.*

**Poprad River Valley Series**

Charcoal from selected sites in the valley of the Poprad River, Beskid Sądecki Mts., West Carpathians, associated with the decline of the Przeworska culture. Collected by K. Tunia and submitted 1983 by J. Machnik.

- **Gd-1626. Moszczenica Wyżnia A/6**  
  Single fragments found in Pit 6, depth 30–50 cm, Site A, situated on a watershed between the Moszczenica and Potok Przysietnicki Rivers, altitude 440 m asl, in Moszczenica Wyżnia (49°30'N, 20°39'E) near Stary Sącz, Nowy Sącz district. Collected 1975.

Gd-1620. Moszczenica Ważnia A/5
From deep Pit 5, Site A, depth 50–105 cm. Collected 1975. 1400 ± 60

Gd-1609. Moszczenica Ważnia C/11
From Pit 11, depth 30–70 cm, Site C. Collected 1976. 650 ± 40

Gd-1619. Piwniczna A/2
From Pit 2, depth 20–40 cm, Site A, located at the drainage of a watershed between the Poprad and Łomniczanka Rivers, altitude ca. 600 m asl, in Piwniczna (49°26'N, 20°43'E). Collected 1977. 1770 ± 50

Gd-1618. Rytro A/13a
From Pit 13a, depth 30–40 cm, Site A, located at the drainage of a watershed on the west bank of the Poprad River, altitude 490 m asl, in Rytro (49°29'N, 20°40'E). Collected 1981. 820 ± 50

MIDDLE AGES

Pułtusk Series
Organic remains from Level V in a medieval castle (Golembnik 1985) in Pułtusk (52°43'N, 21°5'E). Collected and submitted 1979 by A. Golembnik, Warsaw.

Gd-699. PI, organic remains, 422 cm 850 ± 60
Gd-1174. PII, straw, 429 cm 780 ± 60
Gd-1175. PIII, wood from hut, 416 cm 1000 ± 80
Gd-1173. PIV, chopped straw, 420 cm 830 ± 60
Gd-1172. PV, moss, 421 cm 960 ± 60

Orle Series
Wood from two piles found in a vertical position in Site I in Orle (54°39'N, 18°9'E), near Wejherowo, Gdansk district, in Reda-Łeba Pradolina, south of Stare Orle Lake, at depth 125 cm in a layer with mollusk shells. Collected 1984 and submitted 1985 by D. Król, Archeological Museum Gdansk.

Gd-2331. Orle pile #1 990 ± 100
Gd-2328. Orle pile #2 1000 ± 80

Comment (D.K. and M.F.P): Part of Pile 1 was dated independently at Groningen, GrN-12896: 1070 ± 30 BP. Results agree within ±1σ confidence limits (Pazdur et al. 1986).

Stradów Series

Gd-2013. Stradów #1 900 ± 60
From a fire layer, depth 60 cm.

Gd-2015. Stradów #2 930 ± 60
From the center of a rampart, depth 90 cm.

Gd-1671. Stradów #3 890 ± 40
From Rampart IV, depth 15–25 cm.
Gliwice $^{14}$C Dates XI

Gd-1672. Stradów #4C
Gd-2155. Stradów #4W
Charcoal and wood from a large beam of Rampart II, depth 10 cm.

Gd-1674. Umianowice #12-14/78
Large pieces of charcoal (Pinus silvestris L. and Quercus L. spp. (identified by M. Lityńska)) from the base of dwelling Pit 3, depth 1.2 m, below a layer of stones, on the lower terrace of the Nida River in Umianowice (50°36'N, 20°31'E) near Kije, Kielce district. Collected 1978 by W. Morawski; submitted 1983 by J. Machnik.

Comment (W.M.): Associated pottery is dated to an early phase of the Middle Ages (7th–10th century AD).

Gd-698. Gaik 4/79
Charcoal from the base of Pit 5/79, depth 1.6 m, Layer IV with stone construction, Early Medieval pottery and animal bones, Trench 26, on cultural hill Gaik, altitude 100 m asl, in Radzikowo Stare (52°28'N, 20°21'E), Plock district. Collected and submitted 1979 by I. Dbrowska, Institute of the History of Material Culture, Polish Academy of Sciences, Warsaw.

Comment (I.D.): Expected age: end of 7th century AD (Gorska 1979).

Gd-3181. Gródek Lesny #1
Charcoal from a layer at depth 28–30 cm at the abutment of three ramparts in the Early Medieval sanctuary “Gródek Lesny” near Przysuchy Village (51°20'N, 20°36'E), Radom district, Holy Cross Mts. Collected and submitted 1985 by E. Gassowska, Heritage Protection Center, Kielce.

Gd-1902. Zamczysko #2
Charcoal, scattered at depth 30 cm in cult center “Góra Zamczysko” in Widelki near Daleszyce (50°47'N, 20°36'E), Kielce district, Holy Cross Mts. Collected and submitted 1985 by E. Gassowska.

Wyszogrod Drwaty Series

Gd-2283. WD 1/5B/84
From the base of Object 5B/84, Layer XVI, depth 137–140 cm, associated with a furnace and characteristic pottery dated to the beginning of the 7th century AD. Collected 1984 by M. Dulinicz.

Gd-1932. WD 18/5B/84
From the same cultural layer, depth 136 cm. Collected July 1985 by M. Dulinicz.

Gd-2280. WD 2/19/84
From Object 19/84 of unknown function, Layer III, at the base of a pit, depth 55–60 cm, associated with pottery dated to Phase I of Early Middle Ages in Mazovian Lowland, 6th century AD. Collected 1984 by W. A. Moszczyński.

Gd-1931. WD 19/25/85
From a stone furnace in square dugout 25, depth 136–140 cm. Collected 1985 by Z. Kobylinski.

Gd-3211. WD 20/24
From a niche in Object 24, depth 40–55 cm, associated with a unique pot with an engraving representing a rider. Collected 1985 by W. A. Moszczyński.
Biłka Series

Gd-1831. Biłka I/1a
From small collection at the north part of Mound I, depth 60 cm.

Gd-3152. Biłka I/3
From the center of Mound I, depth 65 cm.

Gd-3151. Biłka I/4
From tomb pit in center of Mound I, depth 2.6 m.

Gd-2367. Biłka I/5
Small lumps found at the northern boundary of Mound I, depth 30 cm.

Gd-3124. Biłka I/4

Kraców Kanonicza Series
Wood (Abies alba Mill., identified by Irena Gluza) from the walls of a trench containing a collection of iron axes. In sterile sand, the trench was at a depth 120 cm below a recent floor of a subbasement room in House 13 at Kanonicza Street, Old City, Kraków (50°4’N, 19°56’E), ca. 200 m north of Wawel Castle. Collected July 1979 and submitted 1981 by E. Zaitz, Archaeological Museum, Kraków.

Gd-794. P-1A
Gd-795. P-1B

Comment (M.F.P. and E.Z.): The collection is dated to the end of the 8th and the first half of the 9th century AD. The samples were greatly decomposed and, during standard treatment, sample P-2 from the base of a wall was completely dissolved in alkali solution and rejected. Sample P-1A from the middle of the wall was better preserved but, because of high loss of matter, was counted after dilution with inactive gas. Sample P-1B, collected from same level as P-1A, was treated only with acid.

Kraków Senacka Series
Wooden logs from a structure of unknown function, from Early Medieval layers, Trench III, south part of the garden of the Archaeological Museum, Senacka Street, Old City, Kraków (50°4’N, 19°56’E), ca. 250 m north of Wawel Castle. Samples P-3 and P-4 are Quercus sp.; P-5 is Fraxinus excelsior L. (identified by Irena Gluza). Collected 1978 and submitted 1981 by E. Zaitz.

Gd-1262. P-3
Log 4 from Layer IIId, depth 260–270 cm.

Gd-1272. P-4
Log 8 from Layer IIIf, depth 283–297 cm.

Gd-1273. P-5
Log 8 from Layer IIIh, depth 328–334 cm.
Kraków Rynek Series

Charcoal from pits found below St. Wojciech Church in Rynek Główny, Old City, Kraków (50°4'N, 19°56'E), ca. 700 m north of Wawel Castle. Collected 1962 and submitted 1981 by T. Radwańska, Archaeological Museum, Kraków.

Gd-797. P-6
Charcoal (Pinus silvestris L., identified by Irena Gluza) from pit associated with oldest occupation layer 1, depth 280 cm below actual floor of the church.

Gd-796. P-7
Charcoal (Alnus sp.) from a pit associated with occupation layer 2, depth 325 cm below the actual floor of the church.

Comment (T.R.): Both samples are archaeologically dated to the 10th century AD (Radwański 1975).

Czersk Series

Human bones and wood from a cemetery, Site 1, associated with an early medieval castle in Czersk (51°51'N, 21°14'E) near Piaseczno, Warsaw district. The cemetery is located on top of a hill, ca. 20 m above the valley floor of the Wista River. Graves were dug in medium-grained sands, underlying an anthropogenic layer 2.5–3 m thick. Collected during several seasons of systematic excavations (1960–1980) and submitted 1980 and 1981 by J. Rauhutowa, Institute of the History of Material Culture, Polish Academy of Sciences, Warsaw.

Gd-793. Grave 79/62-A 1090 ± 70
Gd-836. Grave 79/62-L 1025 ± 90
Gd-845. Grave 79/62-E 1210 ± 50
Bones of the same skeleton as from Grave 79/62, Square 25B, depth 237 cm; collected 1962.

Gd-831. Grave 113/62-L 1040 ± 110
Gd-835. Grave 113/62-E 1080 ± 90
Bones of the same skeleton as from Grave 113/62, Square 25BC, depth 293 cm; collected 1962.

Gd-833. Grave 130/62-L 1085 ± 100
Gd-834. Grave 130/62-E 1150 ± 110
Bones of same skeleton as from Grave 130/62, Square 27C, depth 282 cm; collected 1962.

Gd-815. Grave 678/76-W 1235 ± 55
Gd-816. Grave 693/76-W 980 ± 65
Highly decomposed wood, depth ca. 3 m; collected 1976.

Gd-1810. Grave 775/80-L 890 ± 40
Bone collagen, Grave 775/76, Trench 3D, depth 3 m; collected 1980.

Gd-3098. Grave 786/80-L 830 ± 30
Bone collagen, Grave 786/80, Trench 3D, depth 3 m; collected 1980.

Gd-3102. Grave 789/80-L 840 ± 30
Bone collagen, Grave 789/80, Trench 3D, depth 3.3 m; collected 1980.

Comment (M.F.P. & J.R.): The cemetery is archaeologically dated to the 12th–13th centuries AD (Rauhutowa 1976). Bones from excavations in 1962 were used to test different procedures of collagen extraction (A–acid, L–Longin, E–EDTA, cf. Olsson 1979). These dates are internally consis-
tent, but older than expected, which may be explained by incomplete removal of humic contaminants. Dates Gd-1810, -3098 and -3102 are on bones from excavations in 1980, from collagen extracted according to a slightly modified Longin (1971) procedure, and are in fairly good agreement with the expected age of the cemetery.

HISTORICAL SAMPLES

Gd-1665. Cedynia 11/1

Comment (W.L.): The site associated with a historical battle in AD 972 (Filipowiak 1973).

Św. Krzyż Series

Fragments of a corpse and wood from the putative coffin of Duke Jarema Wiśniowiecki in a crypt of Saint Krzyż Church at the top of St. Krzyż Mountain in Góry Świętokrzyskie (Holy Cross Mts.), 20 km east of Kielce. Collected and submitted 1981 by J. Widacki, Department of Criminology, Silesian University, Katowice.

   Gd-856. JW3-coffin wood
   Gd-865. JW4-bone

Comment: Very small sample, undersized, diluted.

   Gd-857. JW1-interstines
   Gd-852. JW2-interstines

Comment (M.F.P.): Samples were dated as part of an interdisciplinary study to check the authenticity of the corpse. ¹⁴C dates do not contradict this hypothesis (Goslar, Pazdur and Pazdur 1983). Duke Jarema Wiśniowiecki died suddenly in AD 1651 at the age of 39.

Gd-1689. Tupadły 2/2
Collagen from a human bone from a burial of three individuals at the edge of a mound in Tupadły (52°42'N, 18°15'E) near Inowroclaw, Bydgoszcz district, Kuyawy Plateau. Collected 1983 and submitted by A. Kośko.

Comment (A.K.): Because of a lack of associated artifacts, this burial was expected to be either from the beginning of the second millennium BC or of historical age. Date confirms historical age of the burial, which is most probably connected with a battle near Tupadły in AD 1665.

UNKNOWN OR UNCERTAIN CHRONOLOGY

Gdańsk Boats Series

   Gd-1896. Curve boat
   Gd-1895. Long dugout

   Gd-1896. Curve boat
   Gd-1895. Long dugout

Outermost treerings from a “curve boat” found in 1951 on the bottom of the Baltic Sea in the Gotland Deep area, ca. 40 km west of Libawa (56°27'N, 19°25'E).

Outermost part of a “long dugout” probably found near Gdańsk before 1914. The boat has been exhibited since 1945 in the Archaeological Museum, Gdańsk.
Gd-3176. Greatest dugout 1070 ± 40
Outermost rings from the "greatest dugout" from a collection of the Central Maritime Museum, Gdańsk; proveniences uncertain.

Borkowo Series

Pine wood from two dugouts found at the bottom of Głębokie Lake in Borkowo Village (54°20'N, 18°20'E), Gdańsk district. Collected 1981 by W. Urbański; submitted by M. Dyrkowa.

Gd-922. Dugout I 60 ± 60
Gd-1424. Dugout II 270 ± 40

Comment (M.F.P. and M.D.): Dugouts were treated with preservatives (polyethylene glycol 1500); samples were stored in water at ambient temperature for ten weeks before being submitted for dating; then they were subjected to standard acid-alkali-acid treatment.

Tolkmicko Series

Oak wood from fragments of two stave boats found in a meadow in Tolkmicko (54°20'N, 19°31'E). Collected 1981 by J. Kucharski; submitted by M. Dyrkowa.

Gd-920. Rib, W-15/7/80 380 ± 80
Gd-921. Rib, Boat Ia 400 ± 80
Gd-1212. Wreck W-18 740 ± 50

Oak wood from the rib of the wreck of stave boat W-18 found in basal sediments at the mouth of the Wistła River (54°22'N, 18°56'E), ca. 7 m below water level. Collected 1980 by M. Iżewski; submitted by M. Dyrkowa.

Comment (M.D.): The boat is typologically dated to the Middle Ages.

Gd-1213. Czarnowsko II boat 1000 ± 90

Oak wood from the keel of a stave boat found in a meadow near Czarnowsko Village (54°45'N, 17°20'E), at depth 30 cm, ca. 250 m south of Łeba Lake shore. Collected 1980 by M. Iżewski; submitted by M. Dyrkowa.

Comment (M.D.): Typologically dated to the 12th century AD.

Gd-2064. Ulanów-Sudoly dugout 1300 ± 50

Oak wood from a dugout found in San River deposits at depth 70 cm in Ulanów-Sudoly (50°34'N, 22°4'E), Sandomierz Basin, southeast of Stalowa Wola. Collected 1983 by Z. Kocur; submitted by M. Dyrkowa.

Gd-2230. Łąd boat 1120 ± 70

Oak wood from rib 13 of a stave boat found in the Warta River floodplain at depth 2 m at the foot of a rampart of a medieval castle in Łąd (52°10'N, 17°50'E), Konin district, Great Poland Lowland. Collected 1984 by M. Brucki and submitted by M. Dyrkowa.

Comment (M.D.): This is the first stave boat found inland in Poland.
